

Secured Access for Remote Employees (S.A.F.R.E.) allows you to easily adapt to this new and ever-changing remote world – *without the worry!*

Addressing the Challenges of Today's BPO

As the adoption of work at home increases, companies are under pressure to provide technical solutions for some of the challenges associated with work at home, including:

- ✔ Security & compliance
- ✔ Scalability
- ✔ Cost
- ✔ Agent experience
- ✔ Ease & speed of deployment
- ✔ Control & supportability
- ✔ Logistics
- ✔ Agent onboarding

SA Hosted S.A.F.R.E. addresses these challenges by enabling agents to work securely from their own personal devices – eliminating the need for the purchase, delivery, and management of hardware and the issues associated with it.

Safe & secure access

Secured Access for Remote Employees (S.A.F.R.E.) secures agents' personal computer, granting them to access corporate environments, applications and data while meeting all security and compliance standards. This allows agents to use their own devices dramatically reduces costs, including:

- Logistics
- Operations
- Support
- Ongoing device management
- New devices

Compliance

S.A.F.R.E. takes the safety and security of your personal information very seriously. All our features have been thoroughly tested to meet the compliance standards set forth by HIPAA, PCI-DSS, PIPEDA, Protected B, and GDPR.

- **HIPAA-compliant:** All features that encounter private medical data handle it in accordance with regulations
- **PCI-DSS compliant:** All card transactions are completed within a safe and secure environment
- **PIPEDA-compliant:** All features that encounter private medical data handle it in accordance with Canadian regulations
- **Protected B data-compliant:** We protect sensitive assets and information in accordance with Canadian guidelines
- **GDPR-compliant:** Your data remains private and secure

Key Features

- 🔒 Locks down personal device
- 👉 Single click installer
- 🪟 Windows patch management
- 👍 Endpoint validation tool
- 🚫 USB device blocking
- 🔍 Write filter*
- 🔑 Magic filter**

Key Benefits

- ✔ Secure & compliant endpoints
- 👥 Rapid scaling of Work at Home
- 📄 Faster recruitment, onboarding & training
- ⚙️ Simplified management & support

*SA Hosted S.A.F.R.E. allows users to set a configurable write filter to be active during the secure session. The write filter redirects any writes to the drive to a temporary virtual overlay that is destroyed upon ending the secure session.

**Magic Filter is a dynamic key press pass-through feature that traps the local Ctrl + Alt + Del and Windows + L keystrokes and as the end user does not have access to the underlying device OS, passes them directly to the remote desktop or application environment.
